CASSIDA food grade lubricants – Solutions for the Edible Oil Processing Industry

CASSIDA food grade lubricants

In the edible oil processing industry, the use of food-safe machine lubricants can mean the difference between a good name and no name at all. The production of edible oil and related products puts the strictest requirements on the lubricants used in the manufacturing process.

Consumer protection is absolutely essential. Incidental and direct oil contamination at any point in the process needs to be avoided by edible oil manufacturers, who process millions of gallons of edible oil for global markets every year. In addition, ensuring that the production process runs smoothly and is highly effective (meaning longer component lifetimes and extended maintenance intervals) is our number one priority.

Our customers benefit from the excellent quality of the CASSIDA portfolio, which has been confirmed by numerous OEM approvals given by well-known manufacturers of production and manufacturing equipment.

Today, major edible oil manufacturers are taking the risk out of their processes by switching to CASSIDA food grade lubricants as the safe alternative for all lubrication points in their production plants.

Our support package

As well as providing you with high-performance food grade lubricants, FUCHS LUBRICANTS AUSTRALASIA is able to offer expert technical advice and support.
