

Aluminium degreasing at room temperature with the best anticorrosive performance

MOVING YOUR WORLD

Degreasing and protecting aluminium parts is one of the biggest challenges in the metalworking industry today.

The different aluminium compositions on the market require fluids that meet their specific cleaning requirements and also provide a high level of corrosion protection for the parts.

FUCHS has developed a special range of products for the cleaning and protection of aluminium to meet all requirements, designed and formulated for parts from both machining and stamping processes.

They exceed the highest surface tension requirements for parts!

A solution for every kind of dirt

RENOCLEAN AL 131

Acidic degreaser

**Room temperature
grease removal!**

Cleaning of machining and stamping oils

- Low pH value
 - Contains organic acids
 - Very high cleaning capacity
 - Can be used by ultrasonic immersion
 - Non-stripping and polishes aluminium
 - Easily dosable
-

RENOCLEAN MTA 4003

Alkaline degreaser

Cleaning of stamping and drawing oils

- High pH value
- Silicate-based product
- Can be used for both immersion and spraying
- Can also be used with steel and galvanised steel
- Easily dosable

RENOCLEAN MSO 3006

Low-alkaline degreaser

**Room temperature
grease removal!**

Cleaning of soluble cutting fluids and low viscosity oils

- Low surface tension prevents droplet formation.
- Free of salts and mineral oil to provide a clean surface free of inorganic residues.
- No foaming, even at low temperatures and high pressures.
- Very good separation of foreign oils.
- Long service life.
- Free of chlorinated solvents, boron, nitrites, phenols and formaldehyde releasers.
- Minimal in-service hazard and environmental impact.
- Suitable for high pressure spray washing machines.

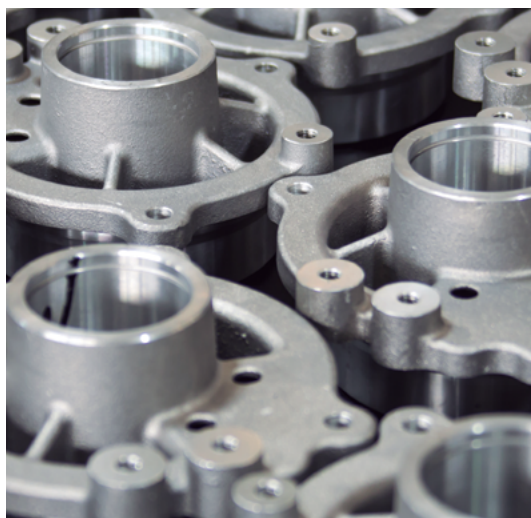

RENOCLEAN T 4092

Neutral surfactant

Cleaning booster

- Contains co-solvents and surfactants for high cleaning capacity.
- Specially designed for cleaning overlapping areas.
- It allows a very high surface tension to be achieved on the work-piece.
- Easy to rinse.
- Can be used as a cleaning capacity booster for other products, both acidic and alkaline.
- To be added at a dilution of 10 % to the concentration of the degreasing agent.
